

Developer ASK Community Systems

ASK Community Systems (ACS) is a spin-off of the research institute and parent company Almende (www.almende.com). The ASK communication software (ASK) evolved from several projects with partners such as the Technical University Delft, CWI (national research institute for mathematics and computer science), Erasmus University and the Vrije Universiteit Amsterdam.

Since our founding in 2003 we bring academic elements concerning self-organization, human-agent networks, algorithmic and distributed systems into practice in ASK. ASK has been developed with open source software and utilizes the software architecture CHAP (Common Hybrid Agent Platform). Connected with a special communication server ASK can access all means of communication between people, web, mobile, and email. ASK is able to match people based on their profiles, information it collects by itself from monitoring the participants' behaviour and collecting feedback when desired.

Currently, ASK Community Systems is looking for a developer which will be working on refining the ASK application. You will be working in a team of experienced developers in which you are jointly responsible for developing systems in accordance with our clients' needs and wishes. You will be in contact with clients at implementation level. You have a college level education mastering in areas such as information and communication sciences, artificial intelligence or electro technology and have several years of experience with Linux and C (++). In preference you have knowledge of Java, HTML, PHP and MySQL. Above all, you are a real team player.

We offer a salary in accordance with market standards, good secondary conditions and a pleasant and dynamic working environment. ASK Community Systems takes an interest in career guidance and development.

For more information call us at +31 (0)10 2250130 and ask for Ingrid Roos or Dennis Dortland.
